Canaloplasty adoption website launched

18 March 2009  
Ophthalmology Times Europe

iForum, a surgeon-support website to enable the adoption of canaloplasty into clinicians' practices, has been launched by iScience Interventional. The company also develops microcatheter technology to be used during canaloplasty.

The website is open to all registered surgeons who are trained in and currently offer canaloplasty. It features a resource centre and a forum, including a chat room and message board, allowing peers to communicate and ask questions about the technique. There are also educational webinars and podcasts for downloading, and video footage of the procedure available for training and to keep users current with the latest developments and advancements. Users may also upload their own videos.

The website can be found at [iforummd.com](http://iforummd.com).

SURVEY

When treating patients with systemic diseases, such as diabetes, do you work with clinicians in other specialties to provide a holistic treatment approach and help arrest disease progression?

- Yes
- I decide on a case-by-case basis
- Sometimes: I attend to a few a year
- No, but it's something I would like to do
- No, never
